The 'Yes' respondents to this question could mark several categories (they averaged 2 each).

NOTE: the SUBTOTAL lines are respondent numbers.

In the respondent blocks, the percentages are of that column's total respondents. So the percentage of those females 30-39 going nude at home is 57.1% of 7; and to the beach: 28.6% of 7. (Note the several columns with very small samples.)

On the subtotal lines, the percentages are of the relevant total (ie: F - 42; M - 74). Thus the seven females 30-39, represent 16.7% of the total of 42 still going nude.

The total % column on the right shows, in the 'female', 'male' and combined blocks, the 'net' percentage for it's row to the left. So 45.2% females 37.8% of males (or a net: 40.5%), 'go nude at home'.

Note the subtotals (in the total % column) show the % of respondents. So of all ex-members, the 'Yes' respondents were 30.9% female and 54.4% male; while a total of 14.7% said 'No', they don't go naked since leaving the club. (But 2 of those saying 'No' specified places where they did - a Female: 'Sauna/Public Spa' and Male: 'Other!').
